SKILLS

React.Js	Google Analytics	Microsoft Office
Javascript/HTML/CSS	Git/Github	Zapier
Python	API	G-Suite

RECENT PROJECTS

- *ADMIN DASHBOARD* _ HTML, CSS, and Javascript were used to build this Responsive Admin Dashboard with light and dark mode theme for an e-commerce website. I used CSS Variables, Grid, Flexbox, and Media queries. CSS transitions and animations were used for cool animation effects.
- *REACT WEATHER APP* _ This project was built using HTML, CSS, API, Bootstrap, and React.js. This application can search for weather anywhere in the world using OpenWeatherMap API and display the future forecast and weather parameters of searched cities.
- *PICTURE BROWSER*_ This project was built using HTML, CSS, API, Bootstrap, and React.js. With this application, a user can search for an image using the search engine and save the desired picture to the "Favorites" list. The search engine is pulling data from the Pexels API. Local storage is used when the image is saved to favorites. An image can also be removed from the "Favorites" list.
